Lifecycle stage × IVV integration level / controlled co-reporting

n=40 reports; lifecycle is multi-label. 'none/not reported' is a controlled IVV level; 3 reports have no selected IVV level.

Lifecycle stage addressed	IVV integration level — panel A				IVV integration level — panel B			
	none/not reported	separate document	trace-linked artifacts	model-contained artifacts	executable checks	simulation-in-the-loop	SIL/HIL	No selected IVV level (3 reports)
concept/pre-Phase A	10	1	4	2	6	11	0	2
Phase A/B	5	1	4	2	3	6	0	0
PDR	0	0	2	0	0	0	0	0
CDR	0	0	1	0	0	0	0	1
implementation	3	0	3	1	1	7	0	2
integration and test	1	0	2	1	1	4	1	1
operations	4	1	2	1	0	8	0	1

Cells are unique-report co-reporting counts; × means cross-classification only / no progression or direct linkage. Omitted zero-only controlled/QA IVV columns—verification matrix adjacent to model; physical integration/test only; unmapped/invalid controlled value—remain in the CSV. All lifecycle rows remain in the CSV.
