<VS-LN-01> Participant Access Logical Node :> 'Valispace Candidate Logical Node'

doc

Groups the three participant-facing interfaces. Placement in a shared browser-accessible environment is supported by Deiana (2025), pages 34-35. Independent reviewer access is provisional because Latserus et al. (2020), pages 5-6, identifies license access as a concern for external verification performers.

<VS-LN-03> Integration and Assurance Logical Node :> 'Valispace Candidate Logical Node'

doc

Groups the interfaces to the authoritative model, analysis tools, and evidence repository with controlled analysis and transfer assurance. The core bridge pattern is reported by Deiana (2025), pages 47-55 and 79-80. Evidence-custody integration is a candidate-specific addition. SysML v2 is used only to describe this candidate for comparison.

<VS-LN-02> Engineering Data and Workflow Logical Node :> 'Valispace Candidate Logical Node'

doc

Groups service coordination, workflow, configuration, evidence, and measurement around the centralized product tree, requirements, engineering data, analysis, and test records. This is a synthesis from the Valispace modules reported by Deiana (2025), pages 36-37. Complete immutable-baseline and provenance semantics remain evidence gaps.
