<COM-LN-01> Concurrent Participant Access Logical Node :> 'COMET Candidate Logical Node'

doc

Groups participant interaction and design review around synchronized COMET clients. Client-server synchronization, Domains of Expertise, ownership, and remote training-model access are reported by Deutsch et al. (2022), pages 2-5. Reviewer-specific findings and disposition control remain proposed.

<COM-LN-03> Analysis Compliance and Assurance Logical Node :> 'COMET Candidate Logical Node'

doc

Groups calculations, external analysis, evidence custody, candidate assessment, transfer assurance, and measurement. The Excel calculation surface is reported by Deutsch et al. (2022), page 3. External tool orchestration, evidence-repository integration, and the complete framework transfer contract are proposed.

<COM-LN-02> Engineering Model and Configuration Logical Node :> 'COMET Candidate Logical Node'

doc

Groups the reusable template, case Study Model, catalogue, requirements, shared reference definitions, workflow, configuration, and retained records around the COMET server. The external-model adapter and complete evidence-chain semantics are candidate additions.
