<CDT-LN-01> Collaborative Decision and Review Logical Node :> 'Custom Candidate Logical Node'

doc

Groups participant exchanges and review authority around controlled textual views, evidence packages, and optional OpenUSD scene views. OpenUSD and Omniverse support shared 3D workflows. The framework retains authority for reviewer findings and disposition control through candidate-specific records.

<CDT-LN-03> Analysis Twin and Assurance Logical Node :> 'Custom Candidate Logical Node'

doc

Groups controlled Python analysis exchanges, reproduction, EPS candidate evaluation, transfer assurance, measurement, and the optional Omniverse and Isaac simulation view. Detailed domain solvers remain external SA capabilities. This node controls their inputs, outputs, mappings, execution identity, and evidence.

<CDT-LN-02> Reference Model Configuration and Evidence Logical Node :> 'Custom Candidate Logical Node'

doc

Groups CSRM tailoring, model exchange, evidence-chain continuity, controlled case and baseline identity, change impact, workflow state, provenance, and repository custody. CSRM supplies the reusable logical foundation. The SysML v2 gateway and configuration records are proposed candidate realizations.
