<NS-LN-01> Participant Web Access Logical Node :> 'Nanospace Candidate Logical Node'

doc

Groups the participant-facing interfaces around the reported browser environment. Browser access, authentication, shared project responsibility, and transparent views are reported by Luccisano (2024), pages 32-33. Reviewer-specific findings and disposition control remain an evidence gap.

<NS-LN-02> Collaborative Engineering Data and Workflow Logical Node :> 'Nanospace Candidate Logical Node'

doc

Groups evidence, case configuration, review, workflow, configuration, and retained engineering records around Nanospace and its graph database. Project, Component, Mode, Value, User, history, requirements, and intermediate-result support are reported in the selected sources. Immutable baseline and complete provenance semantics remain gaps.

<NS-LN-03> Model Analysis and Assurance Integration Logical Node :> 'Nanospace Candidate Logical Node'

doc

Groups model parsing, external analyses, impact assessment, candidate evaluation, measurement, and controlled transfers. The model parser, API exchanges, discipline tools, dependency graphs, and reverse model updates are reported by Salas Cordero et al. (2022) and Luccisano et al. (2024). Evidence custody and the complete transfer contract are candidate-specific additions.
