<NS-PN-01> Browser Client Physical Node

doc

Client-side node directly distinguished from the server side in the reported Nanospace architecture.

<NS-PN-02> Nanospace Application and Data Server Physical Node

doc

Server-side deployment responsibility containing the platform components reported in the Nanospace architecture. Detailed server topology remains unspecified.

<NS-PN-03> Python Model and Analysis Integration Runner Physical Node

doc

Combines the reported model parser and API integration mechanisms into a controlled runner. This separates model-language, API, analysis-tool, and repository changes from the Nanospace application server.
