13 EPS electrothermal, health and stress analysis

13.1 FR-23
Retain declared run configuration

Checked scenario conditions, EPS models, parameters, electrical responses and thermal / rating limits

13.2 FR-16
Execute electrothermal models

Voltage / temperature histories and dissipation; battery use profile, health model and uncertainty basis

13.3 FR-16
Predict battery state of health

SOH predictions / uncertainty indicators and scenario-linked electrical / thermal analysis basis

13.4 FR-16
Assess conducted emissions

Conducted-emission histories / spectra and margins; circuit responses, component ratings and limits

13.5 FR-16
Assess protection component stress

Thermal, emission and component-stress margins; supported effects, execution / numerical / resource limits

13.6 FR-16, FR-23
Retain histories and limit findings
