<SM-01> Framework Operational Control

doc

The framework establishes a controlled case baseline before accepting evidence, reproduction, change, comparison, or review work for that context. Each active service state invokes the corresponding black-box function. A successful typed outcome returns the context to Controlled Baseline Ready. Every deficient, failed, incompatible, or unresolved outcome enters Discrepancy Open. Recovery requires controlled revalidation.

«state»

<ST-01> Unconfigured

doc

No accepted controlled case configuration and baseline are available for the selected work context. Only a verified Case Configuration Request can begin useful work.

configurationRequest : 'Case Configuration Request'

«state»

<ST-02> Configuring

doc

F-02 captures and validates the selected case, common-core revision, environment, adaptations, mappings, assumptions, and baseline. Any previously accepted baseline remains immutable while the new configuration is assessed.

state actions

doconfigureCase : 'Configure Framework for EPS Case'

replacementConfiguration : 'Case Configuration Request'

acceptedConfiguration : 'Configuration Status' [acceptedConfiguration.ready]

«state»

<ST-03> Controlled Baseline Ready

doc

A complete, compatible, and approved case configuration identifies an immutable controlled baseline. Verified requests can dispatch the applicable service function.

«state»

<ST-04> Assessing Evidence

doc

F-01 scopes and validates one designated evidence chain and issues its assessment.

state actions

doassessEvidence : 'Maintain Evidence Chain'

validEvidence : 'Evidence Chain Assessment' [validEvidence.recordsAvailable and validEvidence.chainValid]

evidenceRequest : 'Evidence Chain Request'

«state»

<ST-10> Recovering

doc

F-01 revalidates the corrected evidence chain against its named controlled baseline. Recovery succeeds only when all required records are available and the chain is valid.

state actions

dovalidateRecovery : 'Maintain Evidence Chain'

validRecovery : 'Evidence Chain Assessment' [validRecovery.recordsAvailable and validRecovery.chainValid]

deficientRecovery : 'Evidence Chain Assessment' [not deficientRecovery.recordsAvailable or not deficientRecovery.chainValid]

recoveryEvidenceRequest : 'Evidence Chain Request'

correctedConfiguration : 'Case Configuration Request'

deficientConfiguration : 'Configuration.Status' [not deficientConfiguration.ready]

correctChange : 'Change Evidence Package' [correctChange.correct]

successfulReproduction : 'Reproduction Verdict' [successfulReproduction.successful]

«state»

<ST-05> Reproducing Analysis

doc

F-03 prepares, executes, compares, and issues the verdict for one designated analysis.

state actions

doreproduceAnalysis : 'Reproduce Designated Analysis'

reproductionRequest : 'Reproduction Request'

failedReproduction : 'Reproduction Verdict' [not failedReproduction.successful]

«state»

<ST-06> Assessing Change

doc

F-04 validates one change request, determines its impact, coordinates affected analyses, and validates regenerated evidence. The target baseline remains immutable. A correct accepted outcome identifies a distinct successor baseline.

state actions

doassessChange : 'Assess Controlled Design Change'

changeRequest : 'Design Change Request'

incorrectChange : 'Change Evidence Package' [not incorrectChange.correct]

correctedChange : 'Design Change Request'

correctedComparison : 'Candidate Comparison Request'

«state»

<ST-07> Comparing Candidates

doc

F-05 validates a common basis, evaluates candidate EPS architectures, applies the feasibility gate, and issues raw, Pareto, scoring, sensitivity, and uncertainty evidence.

state actions

docompareCandidates : 'Compare Candidate EPS Architectures'

comparisonRequest : 'Candidate Comparison Request'

incompleteComparison : 'Candidate Comparison Package' [not incompleteComparison.complete]

correctedReview : 'Design Review Request'

«state»

<ST-08> Under Review

doc

F-06 assembles review evidence, supports selected reproduction, links findings and dispositions, and publishes the reviewer-controlled outcome.

state actions

dosupportReview : 'Support Early Design Review'

designReviewRequest : 'Design Review Request'

deficientReview : 'Review Status' [not deficientReview.packageComplete or not deficientReview.reviewOutcome.criticalFindingsResolved]

acceptedReview : 'Review Status' [acceptedReview.packageComplete and acceptedReview.reviewOutcome.criticalFindingsResolved]

completeComparison : 'Candidate Comparison Package' [completeComparison.complete]

deficientEvidence : 'Evidence Chain Assessment' [not deficientEvidence.recordsAvailable or not deficientEvidence.chainValid]

correctedReproduction : 'Reproduction Request'

«state»

<ST-09> Discrepancy Open

doc

The latest service outcome is unavailable, incomplete, incompatible, failed, out-of-tolerance, rejected, or unresolved. Its discrepancy and baseline remain visible. The selected context cannot be represented as ready or successful.
