«part def»

Specified Nanosatellite EPS Engineering Framework :> 'Measured Nanosatellite EPS Engineering Framework'

doc

Complete OOSEM black-box definition. Inherited features provide six boundary service functions, six typed ports, and eleven measures of performance. The features below add required stores and externally declared execution-resource characteristics. Internal components remain unspecified.

attributes

^<MOP-01> valid trace coverage : Percent
^<MOP-02> reference analysis reproduction success : Percent
^<MOP-03> open critical discrepancy count : Count
^<MOP-04> completed contrasting case count : Count
^<MOP-05> undeclared adaptation count : Count
^<MOP-06> correct change turnaround time : Hours
^<MOP-07> case adaptation effort : PersonHours
^<MOP-08> independent reproduction effort : PersonHours
^<MOP-09> framework adoption effort : PersonHours
^<MOP-10> direct framework cost : CAD
^<MOP-11> consistency assurance effectiveness : Percent
declared minimum execution environment : String
declared runtime dependencies : String
